

Kit Life +

MECHANICAL
with no need for
electricity

Kit Life +

The Life+ dosing system **installed directly** on the water mains, uses the water pressure to activate the dosing system, through suction of the concentrated product with subsequent delivery in the required percentage (settable by the user) to mix with the water. The resulting solution is then sent to the lines connected to the system.

The Life+ dispenser is **completely mechanical**, thereby guaranteeing **precision** and **constant value** in dosing throughout the process of administering prepared vaccinations.

Technical data

| Code | Model | Pressure | Flow | % dosing | Consum. of concentrated pr. |
|---------|----------------|------------------|---------------|----------|-----------------------------|
| ZX.1372 | Light | from 0,3 to 6bar | 10 to 2500l/h | 0,2 to 2 | 0,02 to 50l/h |
| ZX.1375 | Extreme | from 0,3 to 6bar | 10 to 2500l/h | 1 to 5 | 0,3 to 125l/h. |

Benefits

- **Easier and convenient** method for mass vaccination
- **Lower costs** of personnel and time required
- **Less stress** for animals
- **More efficiency** in vaccine distribution
- **No risk of errors** in dosage
- **Less waste** of product

kit Life+

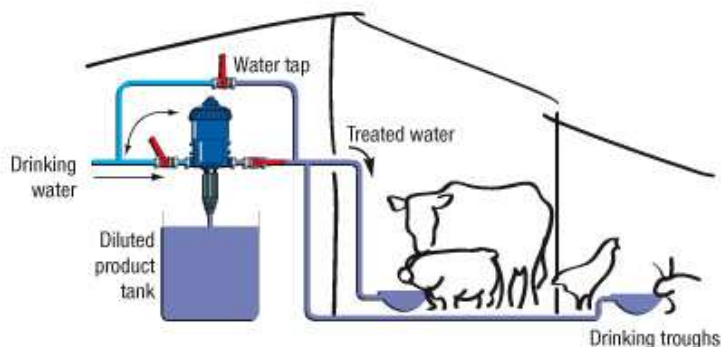

Dosing system of vaccines, medicines and dietary supplements for farms

Suitable in the farms for the administration of medicines and dietary supplements, sanitary treatment of animal watering.

MECHANICAL
no power supply needed

Suitable for animal farms:
pig-breeding, sheep, bovine, equine, ichtyc, rabbit farms

Working principle

Life+ dosing system, directly connected to the fresh water supply line, utilizes the water pressure to activate the dosing operations, starts sucking the concentrated product, mixing it with water according to the required percentage (**which can be set by the operator**).

The obtained solution will be injected to the connected lines.

Life+ dosing system is **completely mechanical** and guarantees **precision** and **regularity** in the dosing process for the administration of medicines and vaccines.

Technical data

| Code | Model | Flow rate | Pressure | % dosage | Concentrated product consumption | Euro |
|---------|---------|---------------------|-------------------|---------------|----------------------------------|--------|
| ZX.1372 | Light | from 10 to 2500 l/h | from 0,3 to 6 bar | from 0,2 to 2 | from 0,02 to 50 l/h | 560,00 |
| ZX.1375 | Extreme | from 10 to 2500 l/h | from 0,3 to 6 bar | from 1 to 5 | from 0,1 to 125 l/h | 590,00 |

Life+ advantages

- **Easier** and **useful** method for a **mass vaccination**
- Working **cost decreasing** and time reduction
- **Reduction of stress** in animals
- **High efficiency** in the administration of vaccines
- **No risk of mistakes** with product dosage
- **Less product wasted**

Components:

- 1 litre counter
- 1 pressure reducer
- 1 10" filter with washable cartridge 50 micron + pressure gauge
- 1 check valve
- 1 Dosatron
- 3 ball valve in PVC for by-pass
- 1 suction hose for chemical product
- 3 ball valve in PVC for 3 lines
